**Methodologies:** Agile, OOP, Functional Programming, DevOps, TDD

**Others:** Docker, Linux, Nginx, PM2, Git, AWS, GCP

## EXPERIENCE

---

### Adsum

Software Engineer

London, UK (Remote)

Jul 2022 – Sep 2023, Full-time

- Developed an automated custom KYC flow using [Veriff](#), enabling user identity and document verification without human intervention, applicable on both web and mobile platforms.
- Implemented the entire front end from scratch, including multiple onboarding flows for different use cases, user dashboards, tax reclaim, status pages, and a chat interface for our [Tax AI](#) bot.
- Deployed the front end using a custom build pipeline through Flask API, facilitating the migration of old HTML pages to the new front end without disrupting the user experience.

### SKOOT

Front-End Engineer

London, UK (Remote)

Dec 2021 – Jun 2022, Full-time

- Developed a UI component library based on Figma designs with over 50 reusable components using Vue.js, enhancing development efficiency and design consistency across the platform.
- Created responsive and accessible web pages, including login, onboarding, dashboard, user profile, and payment, based on a [Micro Frontend](#) architecture. Used GraphQL API to fetch and mutate user data.
- Integrated checkout.com for payments, Formik for form validations, and Hugo to generate a static site - improving the marketing website's performance and SEO.

### Magnet Brains

Web Developer

Bhopal, India

Jan 2019 – Jan 2020, Full-time

- Worked on [Pabbly Email Marketing](#) platform and led the development of [Email Automation](#) project, enabling users to automate their email campaigns based on custom triggers and actions.
- Migrated data of over 1,000 users from the old automation system to the new one with zero downtime, ensuring a smooth transition and improved user workflows.
- Optimized MySQL queries and introduced Composer for dependency management, reducing API data fetching speed by up to 10 times and decreasing server load by 50%.

### Magnet Brains

Web Developer Intern

Bhopal, India

Nov 2018 – Jan 2019, Internship

- Competed with 500 applicants in a 3-month internship program and secured a full-time position by completing all challenges on time and with high quality.
- Wrote a PHP script to check email reputation that can call over 100 APIs in parallel and fetch data in just a few seconds, compared to an old script that took over 3 minutes.

### Rainbow Western

Android Developer Intern

Bhopal, India

Oct 2017 – Nov 2017, Internship

- Developed and published an Android app for buying hotel membership plans to access exclusive features, increasing revenue by 200%.
- Developed and published an Android app for a local NGO to help orphaned children receive donations, increasing donations by 50%.

## SAAS PROJECTS

---

### **Clearalist** | [Website](#)

- Clearalist is an Email List cleaning service that allows users to upload their email lists and get them verified. This app has served over 1,000 customers and processed over 5 million emails. It uses Telnet and SMTP protocols to verify emails and has a 90% accuracy rate.

### **AutomateMyApp** | [Website](#)

- AutomateMyApp is a workflow automation tool that allows users to create custom workflows using a drag-and-drop interface. It supports many popular services like Gmail, Google Sheets, Calendly, and Discord. The tool uses OAuth 2.0 for app authorization and webhooks for efficient trigger handling.

### **ImgAlly** | [Website](#)

- ImgAlly is an AI-based image editing tool that allows users to upload and edit images. It uses an AI model API by HuggingFace and features a user-friendly interface. The tool is deployed on AWS and utilizes a serverless architecture.
